

AMFORE

- Distance from center: 0,7 NM
- Maximum depth: 35 meters
- Minimum depth: 10 meters

The main features of this site are the pieces of amphoras that may be encountered during a dive on a depth of 29-32 meters.

Amphoras are the remains of the ancient roman foundering and all unbroken amphoras have been taken out in the early 70-ies and stored in Archeological Museum of Pula but still there have been left many big pieces of broken amphoras.

Except amphoras, most of the dive time is spent by the very interesting wall which spreads over 30 meters of depth with interesting caves full of underwater life.

In the spring time we often meet octopuses which are searching for a place to lay their eggs.

The position is not suitable for beginner courses.

CRVENE STIJENE

- Distance from center: 1,2 NM
- Maximum depth: 22 meters
- Minimum depth: 3 meters

This position is suitable for the final dives of beginner diving courses and for orientation exercises and using of compass.

We dive by the mild rocky slope which ends in the sand with the depth of 22 meters.

Dive is simple and safe because the depth is not big and orientation is quite easy.

Depending on the season big samples of quality fish like a Dentex, a Sea Bass or a Gilthead can be seen.

FRAŠKER

- Distance from center: 0,5 NM
- Maximum depth: 30 meters
- Minimum depth: 5 meters

The Position is located along the western side of island Frašker and the diving is usually performed downstream.

Although the currents are not strong here, because of easier and more enjoyable dive we go in only one direction, downstream, and the boat follows the group for entire time, which on the end just emerges out along the coast.

This position is very interesting because of its walls and rocks in 2-3 steps up to a depth of 30 meters.

The walls are all of a different kind, full of holes, inhabited by fish and crabs.

JARBOL

- Distance from center: 0,5 NM
- Maximum depth: 30 meters
- Minimum depth: 5 meters

This position is suitable for all diving categories, especially for exercises in advanced and technical courses. It is characterized by the vertical reef which is lowering down from 10 to a depth of 28 meters. At 25 meters of depth is a ship mast stuck in a rock under which are visible remained pieces of the ship. The wall is full of holes and caves of all sizes which can be viewed without entering. On the return we come across the cave which is on a depth of 9 meters and can be entered and viewed.

KOLUMBARICE

- Distance from center: 3 NM
- Maximum depth: 12 meters
- Minimum depth: 1 meters

Position is located in the southern part of the park of nature Kamenjak. It's characterized by the wonderful cave and tunnels in which we dive and the sun rays that pass through cracks in rocks give this place particular charm. In the cave it's possible to emerge on the surface and the depth in the cave and tunnels is up to 5 meters. The location is suitable for beginner categories.

SVIJETIONIK

- Distance from center: 0,5 NM
- Maximum depth: 23 meters
- Minimum depth: 3 meters

On this position we usually dive in one direction, following the stepped wall which abounds with different kind of terrain. There is plenty of fish and crabs on this position, also eels and lobsters are often seen. Because of the small depth it is suitable for beginning categories or first dives after a longer pause.

BUMBIŠTE

- Distance from center: 0,6 NM
- Maximum depth: 33 meters
- Minimum depth: 3 meters

This is a beautiful position with very long and various wall which spreads over 200 meters. During the diving, which on your wish may be on a depth to 20 meters or more, we are going around a few underwater capes with many holes and cliffs, and each of those are rich in colors and different life species. Each of these capes gives a different feeling, visibility and other conditions. This position is suitable for all diving courses and all divers' categories. Lately, here we encounter the Mediterranean monk seal.

FRAŠKERIĆ

- Distance from center: 0,2 NM
- Maximum depth: 25 meters
- Minimum depth: 1 meters

This position is situated on the north part of the island Fraškerić and it is one of the most beautiful diving positions on the west coast of Istria.

Specific features of this place are four caves through which divers are passing during the dive and is suitable for all diving categories and for all diving courses.

There is a plenty of colors and different sponges, shells and snails in all caves.

Many divers want to make a few dives on this position.

GALEBOVE STIJENE

- Distance from center: 2,5 NM
- Maximum depth: 15meters
- Minimum depth: 1 meters

Many divers consider this position as a special desert.

The depth on this position is shallow so really everyone can dive here.

We often use it for the second dive during the day, also, if divers didn't dive for a long time here they can check the knowledge.

Diving is performed by the vertical cliff to a depth of 10 meters, which meanders by the coast and lead us through a few tunnels and passages.

At the edge of cliff we enter in 20 meters long tunnel, with a big cave at the end of it, and the cave is about 20 meters in diameter and about 15 meters high.

You can also get out of the water and spend some time on the coast in the cave.

Frequent visitors are bathers too because it can be entered by swimming.

Diving time is usually more then one hour because of the small depth and consumption.

KANJON

- Distance from center: 1 NM
- Maximum depth: 25 meters
- Minimum depth: 3 meters

This position is described just by its name and is situated on the Verudela cape, which is characterized by a beautiful canyon which gets up to 20 meters above the sea.

Depth in the canyon is 3-7 meters and immediately after exit of canyon, we go through a few natural tunnels on a depth of about 5 meters, after which the ground goes sheer down to the depth of 25 meters.

During the dive by this sheer we come across two big caves and thousands of small holes and caves.

Depending on the weather, diving can be planned in two ways, downstream in one direction with the boat that follows us, or with returning back to the anchored boat.

This place is rich in octopuses and angelfish, especially in spring.

It is suitable for all diving categories and for all diving courses.

After the diving, divers can enjoy watching jumpers jumping into the sea from the top of canyon.

STOJA

- Distance from center: 2 NM
- Maximum depth: 25 meters
- Minimum depth: 7 meters

This position got its name from Camping and settlements that are located here.

The dive is along the coast of the camp on its southern cape.

The terrain is quite sheer in relation to the coast, and is characterized by rocky and irregular configuration with a lot of cuts and canyons.

It is suitable for all categories.
